

Bearing Predictor

Scope of delivery :

1 Battery operated Bearing Predictor with software version 1.1.0 (standard measurements, "mapping" with variable EDM thresholds, storage of up to 40 measurements, communication with PC). Display language selectable.

1 Holster with shoulder strap

1 Set of cables for measurement, and PC communication

1 USB stick with PC program "Beppe Manager"

1 Operator's Manual

1 Computer style carrying case

The price is € 2400, VAT and P&P not included.

An upgraded software package with "Extreme Peak" and "Frequency Measurement with Variable Threshold" is in the works and will be available 2011. Sorry, no "Modem Upgrade" possible. But we will upgrade the SW if you send the instrument to us within one year from purchase.

Also, the "Job List/Roving Inspector" package (create a "Job List" on the PC, download it to the "Beppe", let the display guide the operator to the different objects to be measured and then upload the results to the PC) can be installed at a later moment at the cost of € 780. The "Job List" has been demanded by people in the preventive maintenance business. The Job List package adds another 40 storage places. Standard measurements and job list measurements co-exist and can be used independently for a total of 80 set of measurements.

Special rates available (quantity orders, fairs etcetera). Please refer to such arrangements, if applicable, when ordering.
